

COOL...off the press!

*News flash....Aesthetic game-changer from
CoolSculpting

Health Canada has just approved the CoolMini, a beautifully-crafted, small hand-piece, specifically designed for the sub-mental bulge, notoriously known as 'the double chin'.

Yes, you read this correctly!

Finally, the long-awaited, non-invasive means of dealing with the mini and maxi-bullfrog neck is here.

Results have been consistently great, both predictably and reproducibly, and with a safety profile which has not been compromised to achieve excellent and sustainable aesthetic improvements.

The CoolMini will revolutionize the way we address faces, jawlines and necks, as we can now sculpt the region in a finessed manner and finally provide a safe and easy, non-surgical, needle-less approach to the one area that privately plagues so many.

I am proud to announce that KJD-MD has been selected to receive the first CoolMini in Canada, with delivery slated within days.

I am avidly donning my artist's smock, excited to venture onto one of the last aesthetic horizons, the unattractive neck.

Photo shoots are an unwelcomed experience for many, especially the dreaded candid profile shot, but this could be a thing of the past!

Please feel free to contact Judy at 613.715.9900 if confronting your neck fat is at the top of your aesthetic bucket list.

2015 could be your year!

****News flash.....KJD-MD first in Canada to receive CoolSmooth PRO**

The CoolSmooth PRO has finally been accepted for the Canadian market.

This new SUCTION-LESS applicator, like its predecessor, beautifully reduces the hip fat, popularly known as saddlebags, but more flexibly and in just 75 minute cycles, compared with the previous 120 minute cycles.

The CoolSmooth is, without a doubt, my hand-piece of choice for areas which resist suction, like the central belly and along the back and thighs.

I have also discovered it is perfectly suited for smoothing texture, such as the rippled, irregular surfaces of the lateral aspects and backs of thighs.

As a clinical investigator, I will continue to explore the creative ways in which these devices can provide benefit; in my mind, the opportunities abound. Combined with Thermage CPT for tightening, and the Palomar ICON for textural and pigmentary improvement, most issues can be effectively addressed and ameliorated, as these technologies work synergistically to smooth, tone, and contour, as well as normalize colour.

Please do not hesitate to contact us for further information regarding these novel additions to the CoolSculpting repertoire. It is certainly an exciting time in the world of aesthetics, and I am happy to find myself on the leading edge.

Cheers for now,

KJD-MD
